Be Professional in Embedded System

## ***Mastering Embedded System Online Diploma***

<https://www.learn-in-depth.com>

### **First Term Project 1: Pressure Detection System**

**Name:** Ahmed Atef Ahmed Aseel

**GitHub:**

<https://github.com/Ahmed-Aseel>

## **Table Of Content: -**

- **Case study**
- **Requirement Diagram**
- **System Analysis**
  - **Use Case Diagram**
  - **Activity Diagram**
  - **Sequence Diagram**
- **Block Diagrams & State Machines**
- **Sections & symbols for object files**
- **Sections & Symbols for final elf file**
- **Simulation using Proteus**

## ➤ **Case study:**

A client expects to deliver the software of the following system:

### ❖ Specification (from the client)

- A pressure controller informs the crew of a cabin with an alarm by turn on led when the pressure exceeds 20 bars in the cabin.
- The alarm duration equals 60 seconds.
- Store the measured values.

## ➤ **Assumptions:**

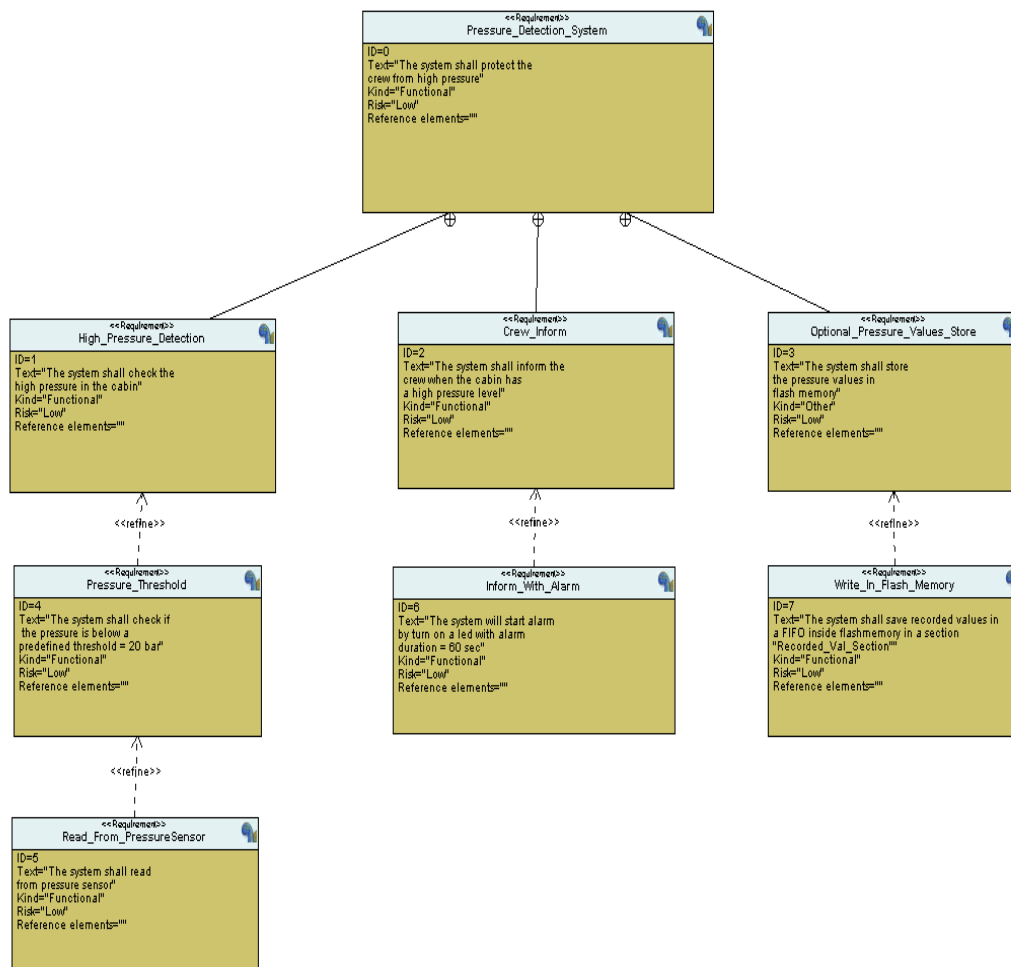

- The system setup and shutdown procedures are not modeled.
- The system maintenance is not modeled.
- The pressure sensor never fails.
- The alarm never fails.
- The system never faces power cut.

## ➤ Requirement Diagram:

We will divide our case study to three main Requirements:

- High Pressure Detection.
- Inform The Crew at High Pressure Levels.
- Optional Pressure Values Storage.

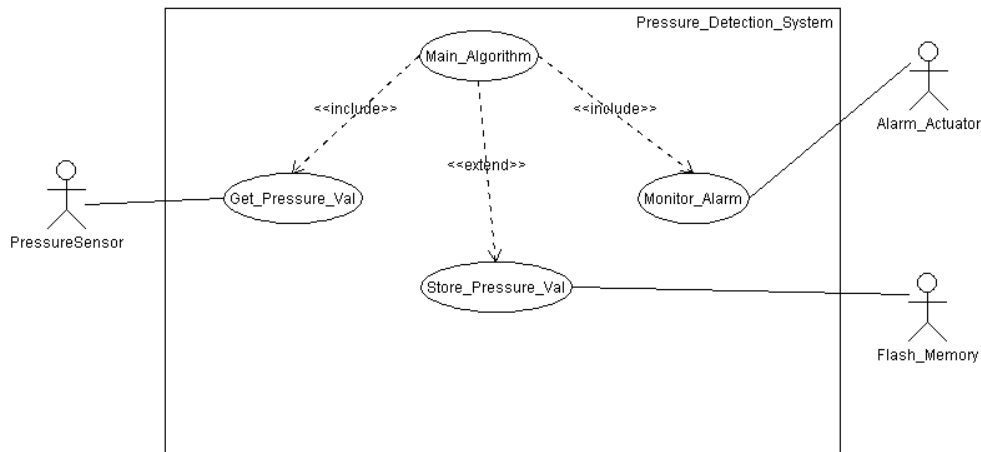

Each main requirement has refinement requirements as mentioned below.

## ➤ System Analysis Diagram:

- **Use Case Diagram:**

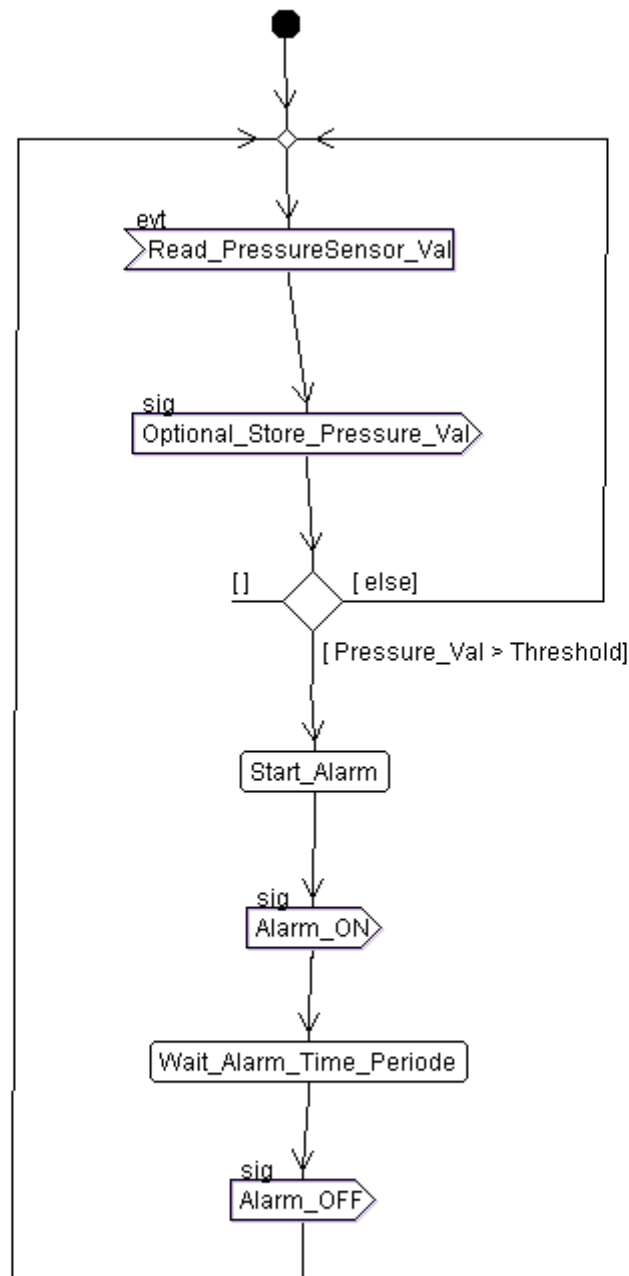

In use case diagram, we discuss system boundary and main functions, so in our use case diagram we will observe that our system boundary includes the main algorithm, get pressure value and alarm monitor and exclude the pressure sensor, alarm actuator and flash memory for storing values.

- **Activity Diagram:**

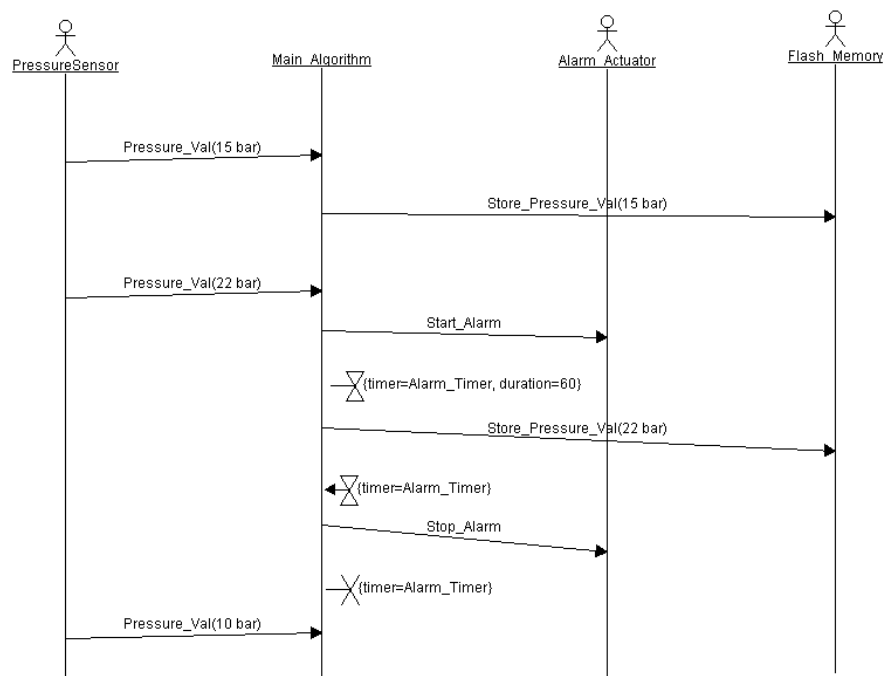

In Activity Diagram, we discuss relation between main functions, as shown below, firstly we will read the pressure value and then store it in flash memory, after that we compare the value of pressure with threshold in case study, if it exceeds

this value, we will turn on the alarm for 60 seconds to inform the crew that the pressure exceeded the threshold.

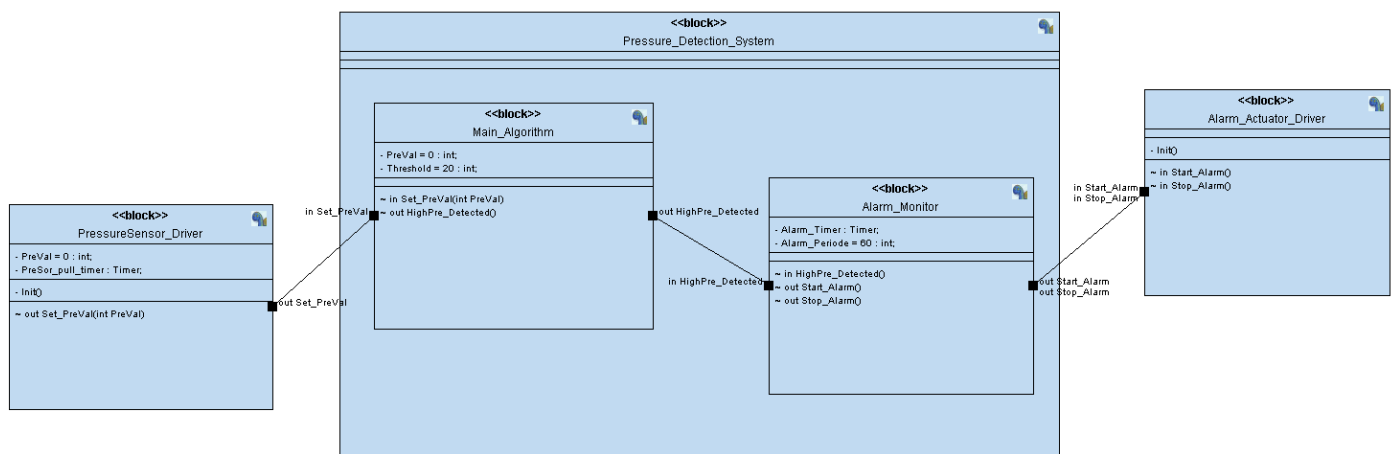

- **Sequence Diagram:**

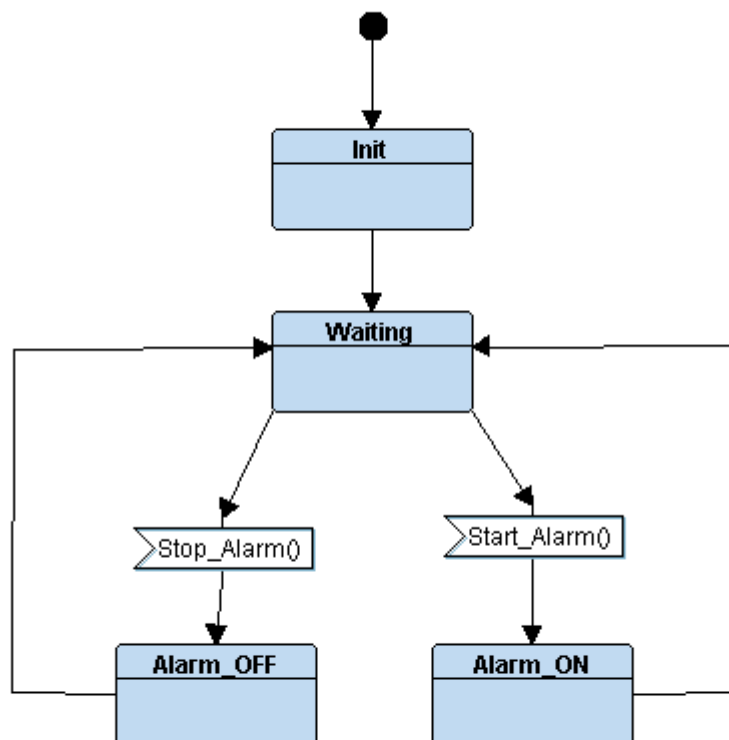

In use Sequence Diagram, we discuss Communication between main system entities and actors, as we mentioned above in activity diagram, we will see interaction between Pressure sensor actor, main algorithm, alarm actuator and flash memory.

## ➤ Block Diagrams & State Machines

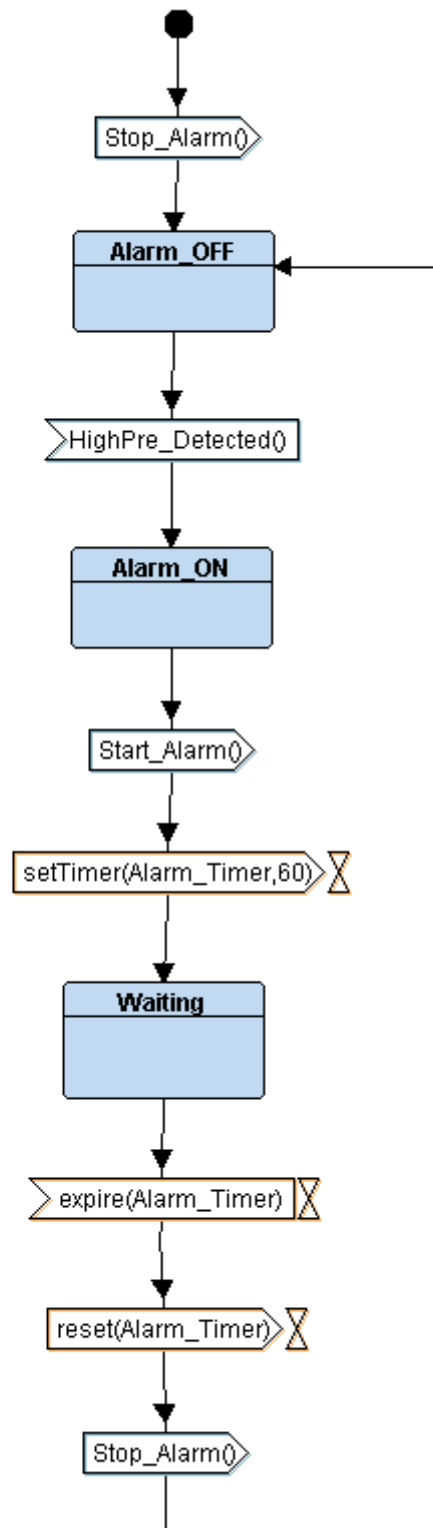

- Alarm\_Actuator\_State Machine

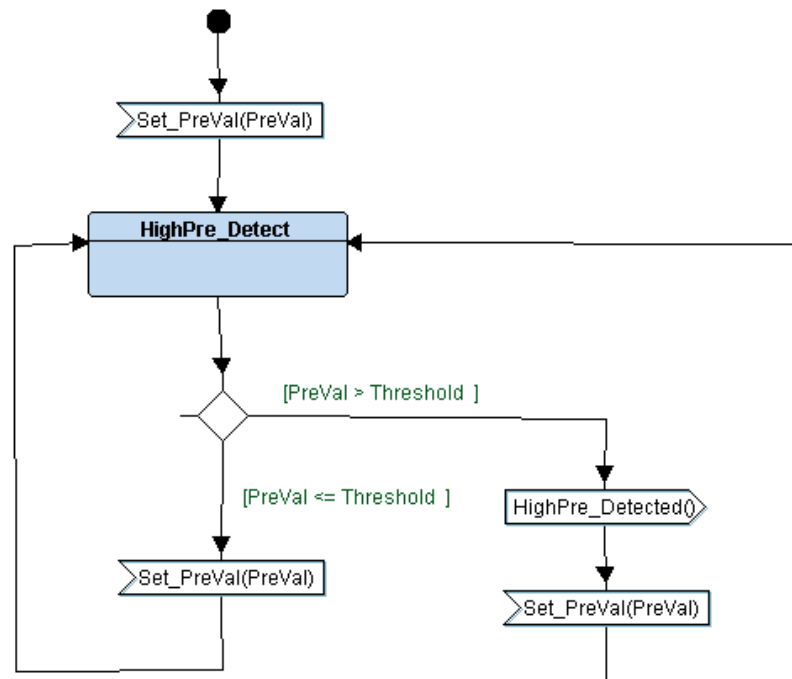

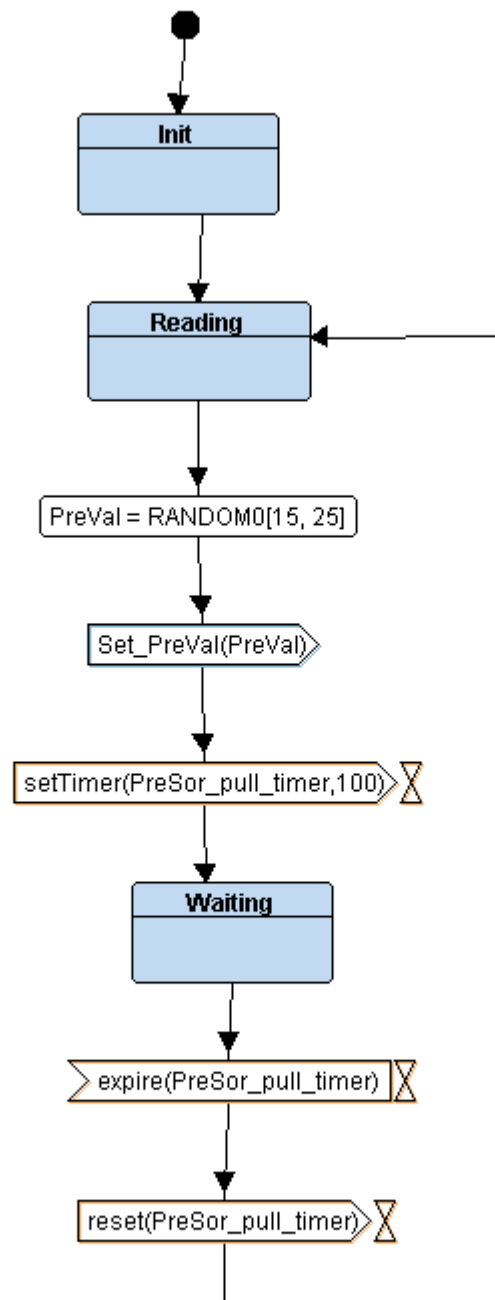

- Alarm\_Monitor\_State Machine

- **Main\_Algo\_State Machine**

## Pre\_Sensor\_State Machine

## ➤ Sections & symbols for object files

- Main
